Zurich -- September 13-15, 2023

# Introduction

# The question

- Increasing success of the far right in the last 20 years all over Europe
- Many factors have been said to contribute to this success (Golder 2016)
- Strategies of mainstream parties have been said to pave the way for the far right (e.g. Meguid 2005; Ziblatt 2017)
- In this paper we focus on the partisan composition of governments

# The question

- Increasing success of the far right in the last 20 years all over Europe
- Many factors have been said to contribute to this success (Golder 2016)
- Strategies of mainstream parties have been said to pave the way for the far right (e.g. Meguid 2005; Ziblatt 2017)
- In this paper we focus on the partisan composition of governments

**Does radical right support increase more when voters are exposed to mainstream right or to mainstream left governments, and what are the mechanisms?**

# Arguments

Reasons to expect both:

# Arguments

Reasons to expect both:

- 1** On the one hand, the far right could fare better under a right-wing government because...
  - ▶ Disillusionment with the performance of mainstream right when in government
  - ▶ Evidence that many far-right supporters are previous voters of mainstream conservative parties (e.g. Abou-Chadi et al. 2021)

# Arguments

Reasons to expect both:

- 1** On the one hand, the far right could fare better under a right-wing government because...
  - ▶ Disillusionment with the performance of mainstream right when in government
  - ▶ Evidence that many far-right supporters are previous voters of mainstream conservative parties (e.g. Abou-Chadi et al. 2021)
- 2** But on the other hand, reasons to believe that left-wing governments can fuel far-right success:
  - ▶ Ideological backlash (e.g. Bischof & Wagner 2019)
  - ▶ Salience of issues owned by the far right (e.g. Dahlström and Sundell 2012)
  - ▶ Compensational voting (e.g. Kedar 2005)
  - ▶ Valence of the mainstream right (e.g. Liang 2013)

# Contribution

- All these mechanisms lead us think that the far right will fare better under left-wing governments than under right-wing governments

# Contribution

- All these mechanisms lead us think that the far right will fare better under left-wing governments than under right-wing governments
- And, surprisingly, in general we do not know much about what is the effect of who is in government on far-right success

# Contribution

- All these mechanisms lead us think that the far right will fare better under left-wing governments than under right-wing governments
- And, surprisingly, in general we do not know much about what is the effect of who is in government on far-right success
- We will do that using an original threefold empirical strategy to identify the main effect and the mechanisms behind it
  - 1 Comparative evidence: Descriptive, correlational, cross-country over time data
  - 2 Quasi-experimental evidence: RDD with close local elections in Spain
  - 3 Individual-level evidence: Survey in Spain using an RDD-based sampling strategy

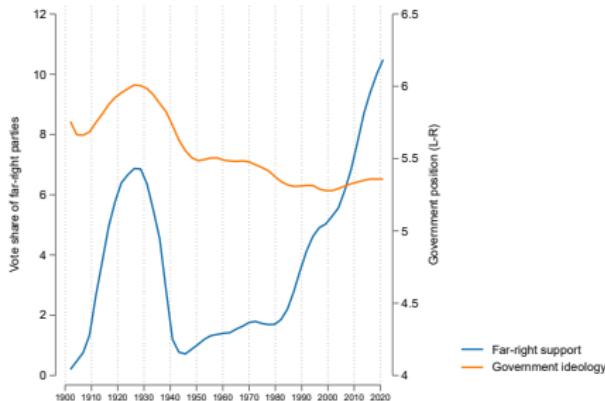

# Comparative evidence

# Data

- Correlation between partisanship of incumbent government and far-right election results
- ParlGov data (Döring et al. 2023)
  - ▶ 37 countries (EU and most OECD democracies)
  - ▶ 1904-2021
  - ▶ 854 democratic elections

# Variables

- **Outcome variable:** aggregate vote share of ParlGov's 'right-wing' party family (nationalist, fascist, and right-wing populist parties)
- **Independent variable:** Seat-weighted average left-right position of the incumbent government at election time, excluding caretaker cabinets (parties' positions from expert surveys)

# Results I

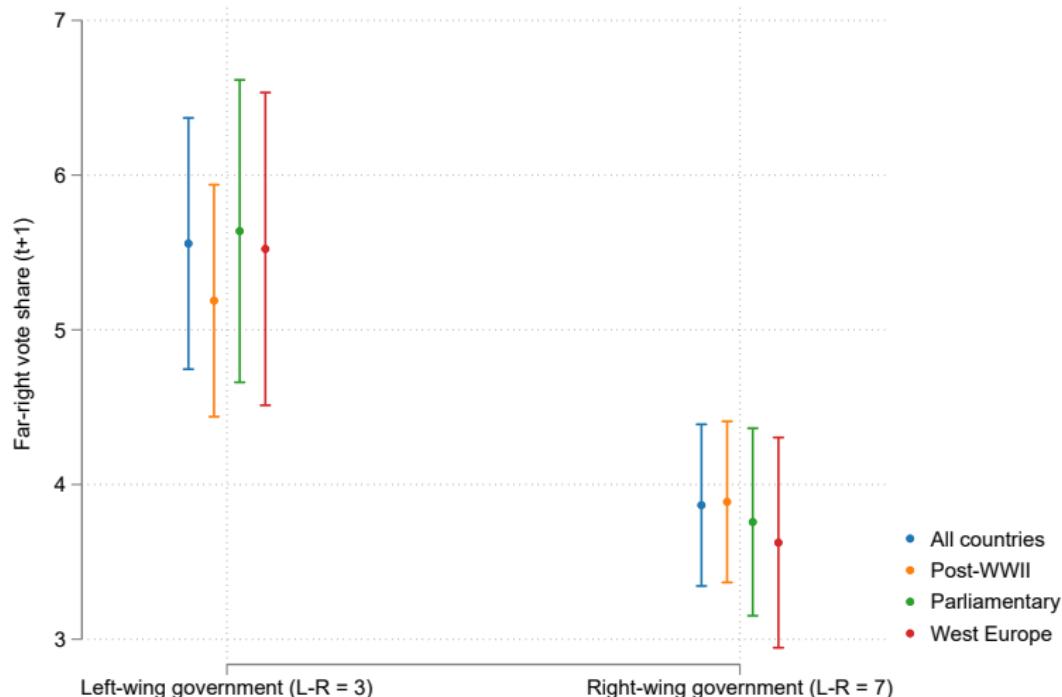

$$FRSupport_{t,i} = \beta_1 FRSupport_{t-1,i} + \beta_2 IncGov(L-R)_{t,i} + \gamma_i + \lambda_t + u_{t,i}$$

	(1)	(2)	(3)	(4)	(5)	(6)	(7)
Incumb. gov. L-R	-.333*** (.123)	-.276** (.134)	-.388*** (.134)	-.422*** (.144)	-.325** (.137)	-.469*** (.173)	-.474** (.185)

Sample	All	All	All	All	Post-WWII	Parl.	West Eur.
N. of countries	37	37	37	37	37	29	20
N. of elections	854	854	852	852	710	715	608

Standard errors in parentheses

\*  $p < .10$ , \*\*  $p < .05$ , \*\*\*  $p < .01$ .

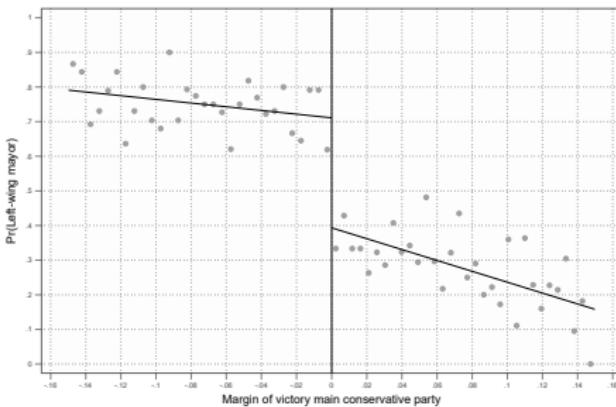

# Results II

## Quasi-experimental evidence

# Close local elections in Spain (fuzzy RDD)

- Given the Spanish local electoral system, we instrument the incumbency of a left-wing mayor (2015-2019) with a narrow mainstream-right win vs narrow mainstream-right defeat in the 2015 local elections
- Forcing variable is the **margin of victory of the main conservative party (PP)** ▶ continuity ▶ balance

# Main results

- We want a measure of far-right support *for all municipalities*  
→ Vote for Vox in national general elections in 2019 as an outcome

	Apr. 2019	Nov. 2019
Left mayor 2015 (2SLS)	0.042*** (0.015)	0.048** (0.020)
First-stage	-.317***	-.317***

N	4,699	4,700

Standard errors in parentheses

\*  $p < .10$ , \*\*  $p < .05$ , \*\*\*  $p < .01$ .

# Reduced-form

The reduced-form (sharp RDD) looks like this:

# Further analyses and robustness

- No systematic effect on other parties' vote shares or turnout
  - ▶ Go
- No evidence of short-run symbolic response to the mere access to office
  - ▶ Go
- Different kernels
  - ▶ Go
- Multiple bandwidths
  - ▶ Go
- Falsification tests
  - ▶ Go

## Individual-level evidence

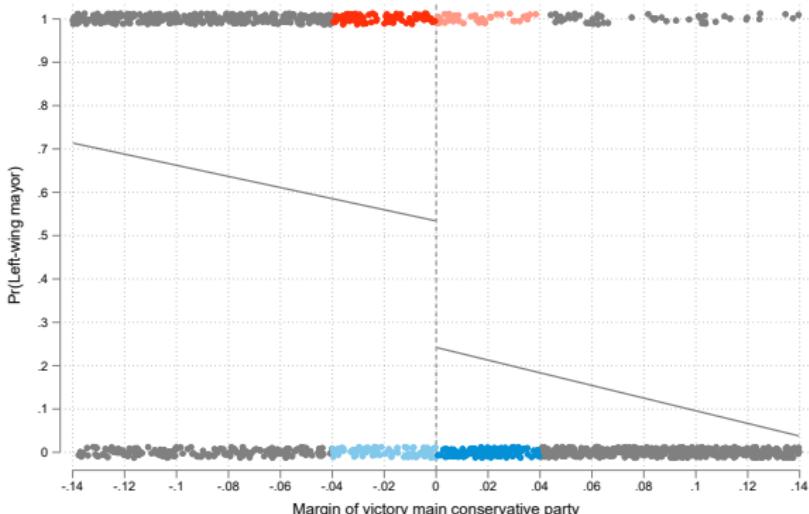

# Testing the mechanisms

Main expectations regarding the mechanisms:

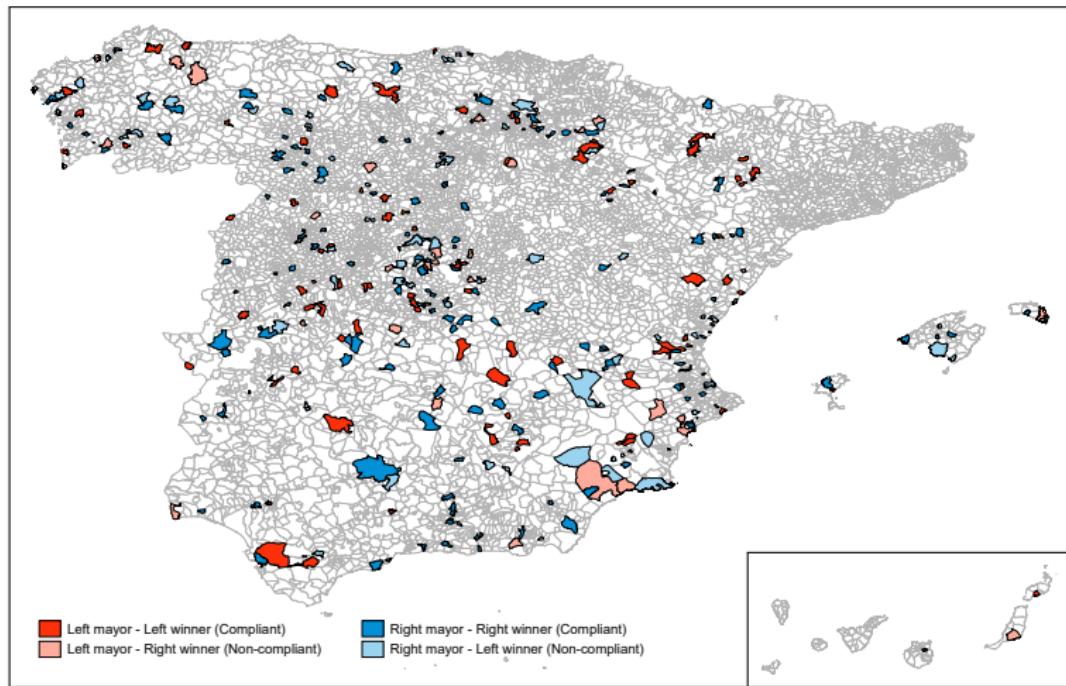

- **Ideological backlash:** Voters' positions on left-right issues will move toward the right when the Left governs.
- **Issue salience:** Voters' perceptions of the salience of issues owned by the far right will be higher when the Left governs.
- **Compensational voting:** Voters' perceptions of the status quo and utility of extreme alternatives will be higher when the Left governs.
- **Center-right valence:** Voters' perceptions of conservative parties' capacity to govern/deliver will be lower when the Left governs.

# Sample I

- Instead of representative sample, we want to build upon the RDD evidence → RDD-based sample of respondents living in municipalities close to the 2019 cutoff ( $\pm 4\%$ )
- Conducted on May 2023 (end of the local term 2019-2023)

## Sample II

# Results I (ideological backlash)

## Conclusions

## Summary and implications

- The far right seems to fare better when the Left governs, both comparative cross-country evidence and quasi-experimental RDD evidence in Spain indicate so

## Summary and implications

- The far right seems to fare better when the Left governs, both comparative cross-country evidence and quasi-experimental RDD evidence in Spain indicate so
- Micro-level evidence suggests that it seems to be the result of ideological backlash against left-wing governments

## Summary and implications

- The far right seems to fare better when the Left governs, both comparative cross-country evidence and quasi-experimental RDD evidence in Spain indicate so
  - Micro-level evidence suggests that it seems to be the result of ideological backlash against left-wing governments
- ! Open question: can backlash be prevented or is it just an inevitable swing of a pendulum?
